

ARTGATE & STURM GmbH

10/07/2015

We are pleased to announce our collaboration with Duisburg-based technology company STURM GmbH. STURM counts companies such as Bosch, Henkel, Siemens, VW and Salzgitter AG among their clients. In 2014, STURM had the privilege of presenting its technologies before the German Federal Parliament's 'Committee for Digitalization of the German Economy'.

The STURM® Campus was founded as a technology-oriented spin-off from the University Duisburg-Essen and supports companies and other institutions with innovative technology solutions with regard to product development processes. ARTGATE is an agency for the realisation of innovative art concepts. We offer tailor-made consultancy solutions at the intersection of commerce and art in Europe as well as in exchange with emerging art markets. **ARTGATE and STURM are collaborating on spreading innovative technologies to and within the art sector.**

One of the main competences of STURM's professional portfolio is the **3D scanning of art objects** for professionals, specialists and first-time users. The 3D scanning technology enables a 100% exact, digital and three-dimensional visualization of single and multiple art objects on the internet (e.g. sculptures). Museums, galleries, corporate and private collections, art institutions as well as private collectors are offered an opportunity to **present their artworks with 100% precision on websites or within virtual realities, capturing the trend towards professional 3D visualization of artworks on the World Wide Web.**

Furthermore STURM specialises in **3D printing technologies, enabling the production as well as the 1:1 reproduction of art objects in three dimensions.** Artists and designers benefit from an innovative technique that provides new sources for the presentation of creative ideas in various 3D-printed materials (e.g. woods, metals, plastics, synthetics etc.). Restorers as well as archaeologists are presented with new possibilities to reinstall objects with the world's most innovative technological resources as well as with the highest possible precision.

ARTGATE and STURM aim to explore the potential for implementing 3D scanning and 3D printing technologies within the art sector, in line with the necessary sensibility to its specific needs and requirements.
